

Gravity Chair

active
rehab

More than just a comfortable seat...

The Gravity Chair is a very supportive foam positioning system to augment postural control for a wide range of individuals.

Gravity Chair follows the principle 'Tension and Relaxation' whereby it provides

- Alternative Seating,
- Serves the therapeutical aim of stable positioning

The Gravity Chair has an appealing look that suits the home or school environment with neutral colour wipe-down covers.

Seating configuration utilises the force of gravity to "hold" the individual very comfortably.

Why the Gravity chair?

- Patients who can only lie down learn to be able to sit in the Gravity Chair
- With patients who spasm, the Gravity Chair absorbs the tension. After the spasm, the chair brings the user back into the original position.
- Patients with perception deficit or ADHD get close body contact in the Gravity Chair which raises self-awareness. This helps the user to stay calm.
- Palliative care clients
- The Gravity Chair can create an optimal solution for many occupational therapy requirements.
